Who are we?

Welcome To Fantasy Girl

Fantasy Girl is the project that connects every possible passive income possibility in one place, from staking pools , nft staking , P2E, and a Decentralised Autonomus Organisation Fund.

Fantasy Girl is the first of 3 projects focusing on maximising the passive income opportunities of its holders, the project is able to achieve this by the level of transparency legitimacy and decentralised protocols implemented for the reassurance of every investor.

At the core of the planning and strategy we have a business entrepreneur with 18 years of experience accross multiple countries and industries this level of analysys paired with the head blockchain developer's drive and level of integrity has given a recipe that aims to thrive in this challenging market by innovating and bringing a usecase to their multiple tokens.

From day one my main focus has been to be transparent , educate new investors and have integrity in every step along this journey.

I am Ami , a former teacher, model and blockchain enthusiast that would like to share knoweledge and wealth amongs the investors.

Discussion And Analysis

The Problem

Our business advisor has set up successful companies in several countries this will bring new investors the reassurance needed.

I have been a crypto investor for almost 2 years but before that I had been playing around with the stock market, I know technical analysis and how to spot good opportunities, during 2020 I discovered several new products with a lot of potential and a lack of direction, or good projects that will end up being a rug pull or any other different type of scams.

Being frustrated and unemployed during the covid 19 pandemic made me closer to crypto its core and the principles of it, I believe crypto will be the next worldwide form of payment, but so many people do not know how to get it or how to spot fake projects.

My goal is to make this project a one of a kind redistributing wealth to all its investors and generating the profit needed for a proprietary blockchain and a payment platform.

After finishing a diploma in blockchain technology in 2020 I started to analyse the possibility of launching a proprietary project, Fantasy Girl started with the idea of a platform like only fans but with crypto as form of payment, this will later on evolve to a metaverse project where creators and fans can keep in touch and purchase exclusive content without the cost of any fees.

This quickly changed as the community grew, 30 days in and the community suggested changes my goal has been from day to based this project in its community for the community, so I invited an entrepreneur to join the team and help me get the direction needed.

Discussion

Currently I am the sole developer and owner of the company established in New Zealand under the name Fantasy Girl.

One of the most daunting problems in crypto is its volatility , lack of transparency, lack of experience from developers on how to run the project as a company, the amount of competition and desire of the market for something different , an all in one package where investors take the full advantage of a broad foundation that focuses on wealth generation and investors opinions.

Analysis

Based on Auckland, New Zealand and having performed a KYC in several platforms we can assure to our investors that we are here for the long run with a lot of ideas that will help innovate in the industry and will bring a usecase to our proprietary tokens.

We came to the conclusion that the best approach was a Decentralised Autonomous Organisation that will provide yield to investors based on the amount of profit generated by its treasury investment fund, in this way the organisation will be making money for the investors and not for a big team of developers , the possibilities of a high return will motivate investors to leave the tokens staked , this will help keep the price of the projects connected stable the price increase , taxation built within the contracts and profit generated by the P2E platform will be reallocated to the holders making this multiproject a one of its kind.

The Platform

We Are Business

With a former entrepreneur as our business advisor the project will be focusing on organic growth solid goals and the best marketing practises.

Fantasy Girl is a platform that uses multiple streams of profit generating assets that redistribute wealth to its investors, the decisions are fully governed by its community and the needs of the investors.

The income will come from several streams:

NFT Staking Platform
Metaverse NFT Marketplace
P2E Casino
Staking and Yield Farming Pools
Defi 2.0 Bonding Protocols.

The FMEV2 token will be utilised as a form of payment within the NFT Marketplace which will allocate the profits of Fantasy Girl special edition nfts and other fees within the platform to its investors in the form of yield paid by staking the token.

Progress

We have delivered every single step highlighted in the roadmap , currently we are on track to continue forward , creating a lot of opportunities for new investors and presale participants.

The ultimate goal is to gather enough liquidity to launch a proprietary blockchain with a stable coin that will provide investors with a never seen before APY.

during March 2022 we are planning to released a limited edition nft collection with 8,888 nfts.

Holders of this NFTs will be able to stake them at the NFT Staking Vault , with a constant APY of 255% to 450% paid in BNB.

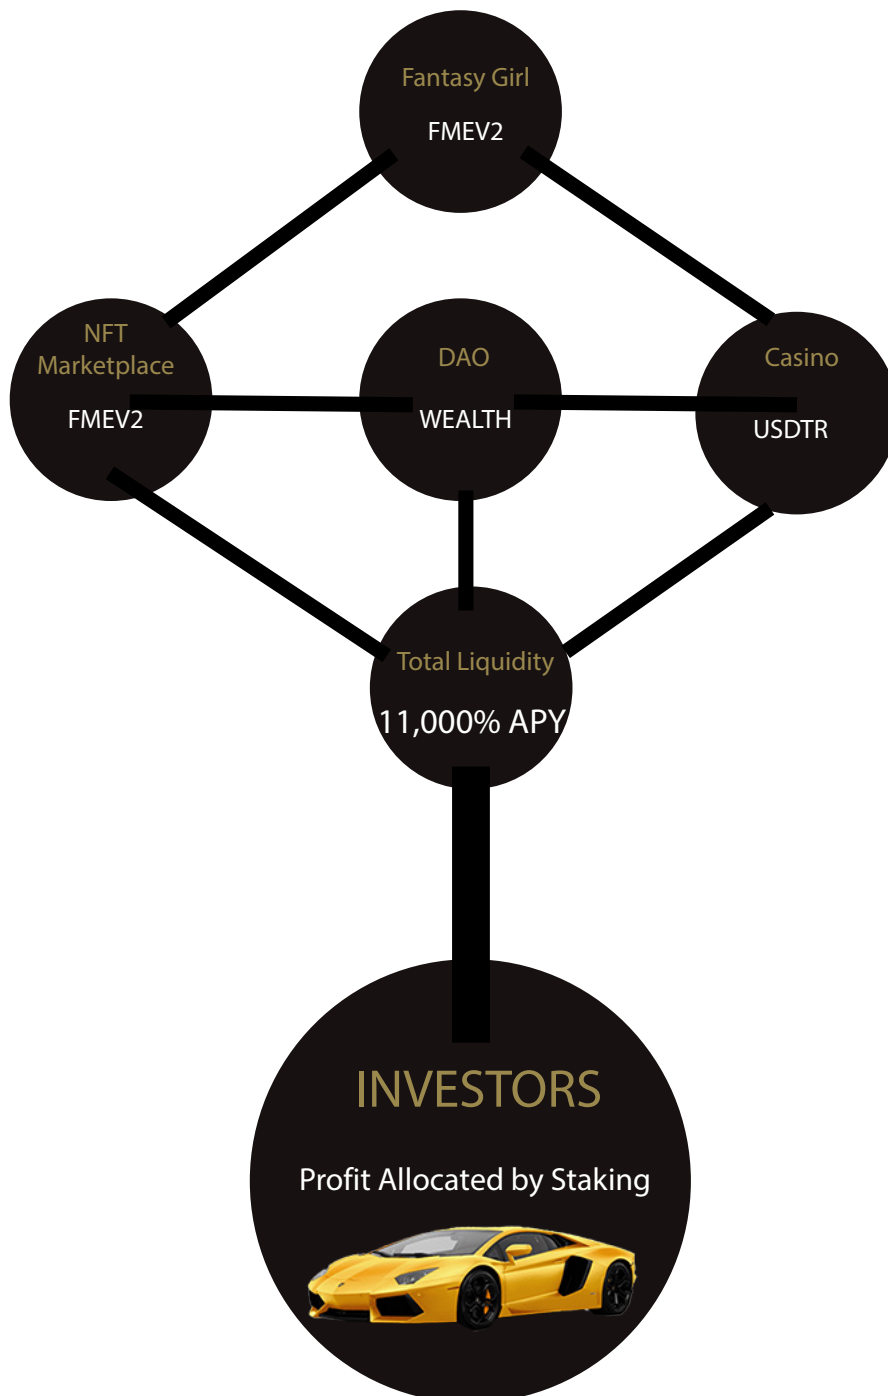

The income generated by the NFT sale will be allocated to the NFT Staking Pool after the collection is released a marketplace will be launch with minting function so people can create and sell NFTs with a very small fee and with the option of staking the nfts minted by them at the Fantasy Girl NFT Staking VAult

Once the NFT Marketplace is release in Mid March 2022 we will open more staking pools to cover every single niech available from SFW and NSFW content to art and anime.

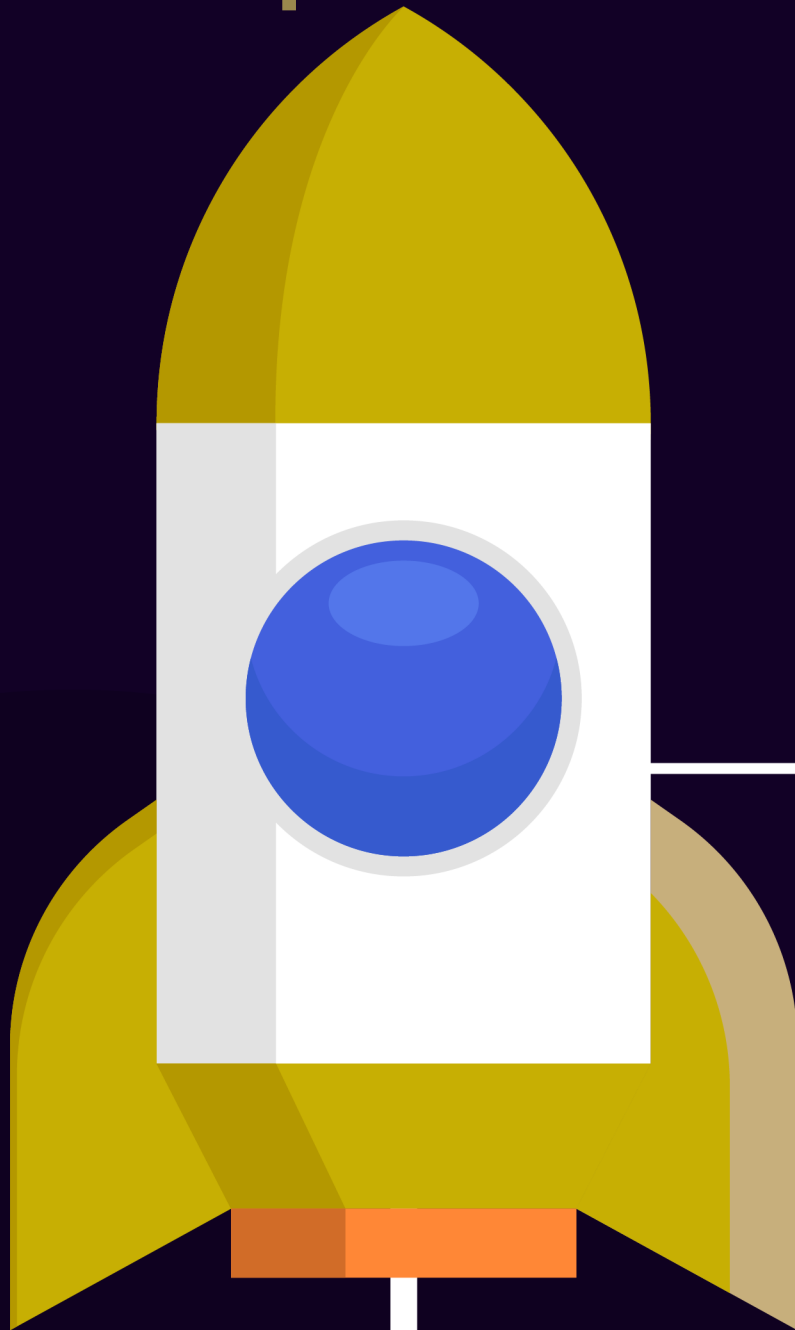

If you have found this project you are early as holding FMEV2 will bring you incredible investment opportunities.

Financial Performance: How is everything going to work?

As mentioned before Fantasy Girl is the first of 3 projects that will supply income and stable liquidity to our flagship staking DAO, The secret Vault.

Roadmap

MARCH 2022

- New Contract
- DAO Presale
- Casino P2E V2.0 release

F
